**Dr.Basker Babujee, Associate Professor, Department of Mathematics, Anna University, Chennai under the title on Transportation Problems in Linear Methods ,03.08.2020**

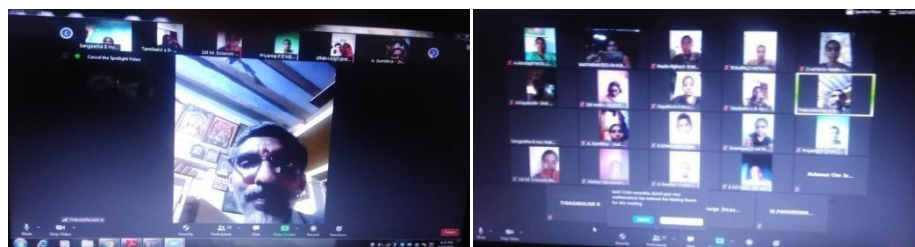

Transportation problem is a special kind of linear programming problem in which goods are transported from A set of sources to A set of destinations subject to the supply and demand of the source and destination. The transportation problem constitutes an important part of logistics management. In addition, logistics problems without shipment of commodities may be formulated as transportation problems. For instance, the decision problem of minimizing dead kilometers (brief explanation from raghavendra and mathirajan, 1987) can be formulated as a transportation problem. The problem is important in urban transport undertakings, *as* dead kilometres mean additional losses. It is also possible to approximate certain additional linear programming problems by using A transportation formulation.
