Title: Carbon Nanotubes

Venue: II-M.Sc physics

Date: 28-02-2020

Abstract: Old newspapers can be used to grow carbon nanotubes: Study

The large surface area of the newspapers provided an unlikely but ideal way to chemically grow Carbon Nano Tubes. Newspaper has the benefit of being used in roll-to-roll process in a stacked form making it an ideal candidate as a low-cost stackable 2-D surface to grow Carbon Nano Tubes.

Class: II-M.sc Physics

Title: HAM Radio

Venue: II-M.Sc physics

Date: 21-02-2020

Abstract: Awareness and details about the HAM Radio

Amateur radio operation is fun, and that is one of the main reasons hams do it. But ham radio can provide communication during states of emergency. Ham radio works when all other services fail. To become a radio ham, you must pass an examination. Wireless amateur communication is done on numerous bands (relatively narrow frequency segments) extending from 1.8 [MHz](#) (a [wavelength](#) of about 160 meters) upwards through several hundred gigahertz (wavelengths in the millimetre range). There are several [license](#) classes and several exams for every class.

Name: B. Manasa

Class: II-M.sc Physics

Title: High Energy Astrophysics

Venue: II-M.Sc physics

Date: 13-02-2020

Abstract: Study of high energy Astrophysics

High-energy astrophysics is the study of the processes that occur within stars, black holes and supernovae. These processes can be monitored by measuring the high-energy

electromagnetic radiation and particles that they emit including x-rays, ultraviolet light and gamma rays. Scientific investigations of objects range from the Sun to distant active galactic nuclei. Research includes studies of the largest scales through wide area surveys. The resources for exploring High Energy Astrophysics at CfA are vast. The two largest areas of investigation exploit the Chandra X-ray Observatory, now in its 13th year and operated by SAO for NASA and a suite of solar orbital and suborbital missions.

Name: S. Yamuna

Class: II-M.sc Physics

Title: Scanning Electron Microscope

Venue: II-M.Sc physics

Date: 24-01-2020

Abstract: Scanning Electron Microscope and its uses

The scanning electron microscope (SEM) uses a focused beam of high-energy electrons to generate a variety of signals at the surface of solid specimens. The signals that derive from electron-sample interactions reveal information about the sample including external morphology (texture), chemical composition, and crystalline structure and orientation of materials making up the sample. In most applications, data are collected over a selected area of the surface of the sample, and a 2-dimensional image is generated that displays spatial variations in these properties.
